Cut & Bend

Robot Welding

Consumable stock item: Spinner (Short or Long)

Under-licence manufacturing & installation

For more information regarding Fabrinox service please visit our website www.fabrinox.com or send e-mail to sales@fabrinox.com

Fabrinox provides **agricultural equipment manufacturers** with innovative manufacturing solutions in stainless steel, mild steel and aluminium, which includes batch manufacturing, custom tailored project management along with technical and manufacturing advice.

Our project management department offers customers a complete manufacturing solution including electrical control panels and installations. The project team also assists customers from the design stage with our manufacturing design input, compiling the data pack, as well as the manufacturing, installation and commissioning.

The development process is complete CAD based and designs are reviewed and finalized in digital format even before any prototyping started. This serves as an excellent example of technology making product development much faster and more cost effective.

Providing best quality products and best value for money, Fabrinox is a vital part of the supply chain in the sheet metal industry in South Africa, ensuring the quality products that you deserve.
